

ShellScript

1. Checker

ShellCheck – shell script analysis tool

Run it on everything you ever write

2. Basics

Shebang

#! at the begging of shellscripts

```
// #!+path to interpreter+arguments
```

```
#!/usr/bin/env bash
```

or

```
#!/bin/bash
```

or

```
#!/bin/sh
```

codes

Env

it will look through the **PATH** and tries to find the program specified and runs it.

And we don't need to write the path to interpreter but just set the PATH.

Set PATH
